THE ONLY PERFORMANCE BOATING MAGAZINE THAT MATTERS

SNAPPER BOAT LAUNCH

EPCO Products makes boat launching and loading a breeze with the new remote control Snapper Boat Latch. This unique device replaces the roller or v-block normally attached to the trailer winch stand. When launching your boat (while in it!), you simply press and point the remote at the Snapper, opening its mechanical jaws and releasing your boat from its trailer automatically. When catching/loading, simply press and point to light up the Snapper. When the boat is secured (Snapper jaws clasped to the bow eye), the light shuts off. No more wet feet, and all that's left for you to do is secure the winch hook to the bow eye and secure the tie downs! The Snapper remote works from 50 feet or more and features a 12-volt electrical system, waterproof connections, anti-theft padlock feature, and lifetime warranty. We can't wait to get our hands on one! For more information, contact EPCO Products at: (800) 879-3726 or www.epcomarineproducts.com.
